Plant Science B.S.

Agronomy & Plant Genetics, Entomology, Horticultural Science, Plant Pathology

College of Food, Agricultural and Natural Resource Sciences

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2018
- Required credits to graduate with this degree: 120
- Required credits within the major: 75 to 79
- Degree: Bachelor of Science

The plant science major provides a broad course of study in plant sciences, as well as options to concentrate more specifically within an area of individual interest. The major prepares students for rewarding careers in diverse areas, such as research and development (plant breeding, genetics, or plant molecular biology); food and plant production (sustainable and organic production or floriculture and nursery production); plant use and function (restoration of damaged landscapes); and management of landscapes (agro-ecology and turf grass management). Students gain experience in the use of plants to produce food and other useful products, alter environments, restore damaged landscapes, improve human health and well-being, educate people about science and agriculture, improve community environments, and provide recreational and practical benefits to the public.

Program Delivery

This program is available:

- via classroom (the majority of instruction is face-to-face)

Integrated Plant Science BS/MS Applied Plant Science - Plant Breeding

Sub-plan catalog description: CFANS offers an integrated bachelor of science (BS) in plant science and master's of science (MS) in applied plant sciences (plant breeding and molecular genetics track). The integrated BS/MS program offers students the opportunity to earn both degrees in five years by working toward a master's degree while simultaneously working toward their undergraduate degree. Plant science undergraduate students in the plant breeding and genetics sub-plan are welcome to apply to this program during their 3rd year of undergraduate study. During the the 4th year, students take undergraduate and graduate courses concurrently and are advised by an undergraduate and graduate program advisor. Students must complete undergraduate degree requirements before the end of their fourth year.

If the student does not pursue or complete the applied plant sciences MS degree portion of the integrated plant science BS/MS applied plant science - plant breeding track, their sub-plan will revert to plant breeding.

Students in this program will complete the 120 undergraduate credits required for a BS degree in plant science by the end of the 4th year and must be awarded an undergraduate degree at the 4th year mark or earlier. During the 4th and 5th years, student will complete 30 graduate credits and a Plan A or B research project with a final oral defense as required for the applied plant sciences MS degree. Student cannot double count credits to meet credit requirements for both the undergraduate and graduate degrees.
